

# AUTO DEALERSHIPS AND TILT-UP

An automotive dealership is more than a building; it's an expression of a brand. It needs to project a corporate image of quality, while still providing a structure that protects its valuable inventory. Tilt-up provides those benefits and more.

Tilt-up is the process to construct architectural load-bearing insulated concrete wall panels. The panels are typically cast on the floor slab (or off site) and then tilted into place saving great expense in transportation costs. Across North America, a growing number of auto dealers are discovering the advantages of the SiteCast tilt-up system.

## ADVANTAGES

- 1** **ARCHITECTURAL FREEDOM** allows dealerships to creatively project their corporate image.
- 2** **SPEED** is achieved through excavation, foundations, panel assembly and roof framing time savings.
- 3** Column-free interior walls provide **UNOBSTRUCTED** office, showroom and work areas.
- 4** **DURABLE** concrete walls provide maximum protection against illegal entry and continued maintenance free exterior costs.
- 5** The natural **FIRE RESISTANCE** of concrete reduces insurance premiums.
- 6** The inherent **THERMAL PERFORMANCE** of insulated concrete panels provides maximum energy efficiency.

# TILT-UP DELIVERS SPEED, SECURITY AND STYLE

SiteCast structures feature column-free perimeter for maximum floor utilization while hard wall construction adds security, as well as noise and fire resistance.

Insulated concrete panels are energy efficient and subsequently result in reduced operating and continued maintenance costs.

SiteCast Construction Corp. Ottawa, ON

## TILT-UP PROVIDES AUTOMOTIVE DEALERS WITH ATTRACTIVE, SECURE, DURABLE AND ECONOMICAL FACILITIES

### Benefits of working with SiteCast

- ⇒ An experienced team that understands how to make tilt-up panels work for any building or structure
- ⇒ A design that leverages the benefits of tilt-up
- ⇒ Proven processes to get the job done efficiently and effectively-on budget and on schedule
